#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hull et al. in view of Bourell et al.

Hull et al. discloses the method substantially as claimed.

Hull et al. discloses at col. 2, lines 7-14, 30-51, a method of forming a material body comprising:

providing a powder mixture; and

selective laser sintering (SLS) the provided powder mixture to form a material body.

Hull et al. further discloses wherein the powder mixture is selected from metal powders selected from a group comprising titanium, titanium alloys, tin, copper, nickel and alloys thereof.

However, Hull does not disclose wherein the laser sintering is performed so that a metal with the lower melting point in the powder mixture is melting during the sintering.

Bourell et al. teaches to use mixtures of metals with lower and higher melting points and to SLS the mixture to melt the lower melting point metal and form a material body.

It would have been obvious to one having ordinary skill in the art to use the method of Bourell et al. in the invention of Hull et al. in order to arrive at a material body formed of

titanium and a lower melting point metal selected from a group comprising tin and Ni-Cu alloys.
